RESTRICTION

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-11**, drawn to a manufacturing method for producing a chamber in a liquid ejection head, classified in class 72, subclass 325.
- II. Claims 12-18**, drawn to a liquid ejection head chamber, classified in class 239, subclass 589.

The inventions are distinct, each from the other because:

Inventions I and II, respectively, are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, the claimed product, which is viewed without regard to the process of its manufacture, can be produced without recourse to the claimed method. In this regard, the claimed "deformation absorber", which is in the form of an opening, could be used in part as a mounting opening for the mother metal plate within the liquid ejection head. Because of the peculiar nature of product-by-process claims, these claims are handled as product claims when they are same or obvious variant of a product shown in the prior art.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is

Art Unit: 3725

proper. Different considerations are employed between manufacturing process claims and claims directed to product-by-process claims.

ELECTION

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
